

The image above is excerpted from an AutoCAD drawing prepared in 1996 for the John Street improvement project. An electronic copy of this drawing will be provided to the successful consultant. From a field visit, the following utilities can be identified:

- The existing wading pool drains to the storm sewer inlet located near Station 4+00 through an (approximate) 6" PVC pipe.
- Utility markouts indicate that 33 Lytle Street (lot 72) has water, gas and sanitary sewer connections from Lytle Street.
- Utility pole 60368 has an overhead street light directed over the park property (lot 36).
- A sanitary sewer connection is provided at the northern end of the park property (lot 36). Per the map above, it may provide sanitary sewer service to lots 37 and 38.
- Overhead utilities extend from John Street over the park property (lot 36) to 33 Lytle Street (lot 72) and to lots 37 and 38.
