IMPORTANT NOTICE REGARDING EDGEHILL STREET

On Monday, October 6, weather permitting, Layne Inliner (in conjunction with ICUNJ) will be mobilizing equipment in the vicinity of Edgehill Street in preparation for upcoming sanitary sewer main lining over the next two weeks. They will also be performing some TV inspection work on these streets.

On Wednesday, October 8, weather permitting, Layne Inliner will begin to install the sewer lining on Edgehill Street. The work is scheduled to take two (2) days to complete.

We will provide a daily schedule of this work in a subsequent update. You will also receive an additional notice concerning the daily sanitary sewer main lining activities which may affect your sewer usage.

The sewer lining technology allows a new pipe to be installed inside the existing sanitary sewer line without roadway excavation. Please be advised that this lining technique does create an odor. This odor can get into your home if your sanitary sewer lateral is improperly ventilated, traps are not working correctly or if floor drains are connected to the sanitary sewer lateral. The odor is not harmful.

The process, when done, will temporarily block your service connection for approximately six (6) to eight (8) hours. During this period, it is critical that you minimize your water use. We ask that you minimize the use of toilets and sinks, and that you eliminate such activities as laundry, dishwashing and showers during the specified work hours.

Please be advised that as the crew performs the work, several large vehicles will be utilized. As such, the crew may be parking a vehicle in front of your driveway; we will knock on your door prior to doing this.

As always, should you have any questions concerning this project, please contact the Princeton Sewer Operating Committee. We regret any inconvenience that this may cause and thank you for your cooperation.

Very truly yours,

Robert A. Hough, P.E.
Manager / Engineer
