

July 1, 2016

Dear PSE&G Customer,

You are invited to attend a workshop to learn more about PSE&G's gas main replacement project in Princeton. We will be replacing aging cast iron gas pipes with new, durable plastic and/or coated steel piping – ensuring the continued safety and reliability of our gas system well into the future.

**The workshop will take place on Wednesday, July 13 from 7 to 9 p.m. in Princeton Monument Hall (former Borough Hall) Main Meeting Room, located at 1 Monument Drive.**

PSE&G values and welcomes input from the communities we serve. We hope you will attend this informational session to speak with experts on a one-on-one basis and learn more about this project, which is scheduled to begin later this month. There will be no formal presentation, so residents are welcome to come anytime during the workshop.

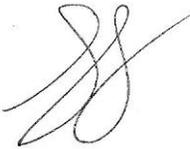

- **Before construction can start, PSE&G tests soil and digs test holes to verify the location of existing gas mains.** When this preliminary work is complete, we will begin installing the new gas mains and upgrading associated service lines that carry the gas to homes and businesses.
- **To upgrade the gas mains, we will dig trenches, primarily in road surfaces, and lay new pipes block by block in limited areas each day.** As a result, there may be short-term road closures and/or detours. Local police will be on the scene to direct vehicle and pedestrian traffic. At the end of each workday, the trenches will be filled in. Plates will be secured on any open areas so people can safely drive and walk. We may also need to temporarily store material in the area required to complete our work.
- **Once the gas mains are upgraded in the street, PSE&G will need to access your home to connect the service line and gas meter to the new gas main.** We will contact homeowners to arrange a date and time to do the work. If your gas meter is located inside, we will relocate it to the outside of your home or business. During the reconnection, you can expect to be without gas service for about 4 hours. PSE&G will relight all appliances and make sure they are safely working before leaving a home. Any lawn areas, shrubs or other vegetation affected by our work will be restored. Grass areas will be raked and seeded.

- **When work is finished, we will repair roads with temporary pavement until the ground settles.** This takes about 45 to 90 days, depending on the weather and soil conditions. PSE&G then restores the roads with permanent paving in accordance with town ordinance and paving requirements.

Please visit [www.pseg.com/gaswork](http://www.pseg.com/gaswork) to learn more about the project. If you have any questions or concerns, please call our district office at 609-421-8018. Once the work has started, you may also speak to the supervisor on the job site.

We are committed to keeping you informed about where and when the work will take place. We appreciate your patience and cooperation as we work to complete these important upgrades to our gas system. This is all part of PSE&G's effort to keep New Jersey's energy infrastructure safe, strong and reliable.

Thank you very much,
