Healthy foxes pose virtually no danger to humans. Foxes are most active this time of year. Many have dens with kits (baby foxes) and will be looking to feed their family, both day and night.

Foxes have grown accustomed to human activity and are seldom aggressive towards people. Except for raising young, foxes are solitary animals and do not form "packs" like wolves. Foxes prey on mice, rabbits and ground nesting birds. Healthy foxes do not attack humans.

Animal Control does not remove healthy wildlife. Property owners should consult with wildlife removal companies for nuisance complaints. Any animal showing acute signs of rabies should be reported right away. These signs include: the inability to walk, falling over or walking in circles, making a continuous noise, biting at inanimate objects, seizures, or any other neurological issue. Scaring techniques can be used such as yelling, clapping or banging pots and pans together.

Remember, these animals are used to our activity so they may be stubborn!

Foxes in Princeton
A message from Princeton’s Animal Control Officer, Jim Ferry:

During the COVID-19 pandemic and the decrease in human activity, Princeton’s foxes have become a more common sight.

Here are some helpful tips:

- Healthy foxes pose virtually no danger to humans
- Foxes are most active this time of year. Many have dens with kits (baby foxes) and will be looking to feed their family, both day and night.
- Foxes have grown accustomed to human activity and are seldom aggressive towards people.
- Except for raising young, foxes are solitary animals and do not form "packs" like wolves.
- Foxes prey on mice, rabbits and ground nesting birds. Healthy foxes do not attack humans.
- Animal Control does not remove healthy wildlife. Property owners should consult with wildlife removal companies for nuisance complaints.
- Any animal showing acute signs of rabies should be reported right away. These signs include: the inability to walk, falling over or walking in circles, making a continuous noise, biting at inanimate objects, seizures, or any other neurological issue.
- Scaring techniques can be used such as yelling, clapping or banging pots and pans together.
